

## Project Fact Sheet

**Georges Square, Balbriggan, Co. Dublin**

# Georges Square, Balbriggan

**Project:** George's Square, Balbriggan, Co. Dublin

**Value:** €14m

**Client:** Moriarty Group

**Stage:** Completed

## FACTFILE

GEORGES SQUARE DEVELOPMENT WAS COMPRISED OF A HIGH QUALITY PUBLIC PROJECT WHICH CONTAINED LEISURE FACILITIES, LIBRARY AND COMMUNITY CENTRE. IT INVOLVED THE CONSTRUCTION OF A BASEMENT CAR PARK OF 4,708 SQM OVER TWO LEVELS WITH A MIX OF OFFICE, RETAIL, LEISURE AND RESIDENTIAL BUILDINGS.

## SCOPE OF WORKS

The site was located in the main street of Balbriggan and was bound by an existing library, an existing hotel and public road. To allow excavation of the basement, the site was piled using CFA piles on three sides with ground anchors used to support the piles. The foundations were piled using both continuous flight augered (CFA) and odex piling to accommodate the varying ground conditions. The basement structure was a traditional reinforced concrete frame design with a 600mm podium slab to support the basement structures.

The podium slab structures consisted of a 22-bedroom extension to the existing five-storey hotel, 1,600 sqm three-storey offices for Fingal County Councils' new Library and Town Council offices, 18 no. one and two bedroom apartments and a 350 sqm new function room off the existing hotel. A total of four retail units were located below both the offices and the hotel extension. The structures to all these buildings were constructed with a combination of reinforced concrete walls, structural steel, precast slabs and in-situ concrete slabs. The cladding was a mix of brick, stone cladding, zinc cladding and curtain walling.

## Refurbishment Works to Existing Library

During the project, additional work instructions were issued involving the existing Fingal Balbriggan Public Library. The existing library was gutted and refurbished to incorporate a first floor level connection between the library and the main development retail area. This connection was made by installing a mezzanine level and balcony. A glass and timber thread stairs on an exposed steel structure was installed to accommodate access between levels. Other fit-out works carried out within the library included dry-lining existing walls, construction and finishing of stud partition walls to create offices and all internal wall and ceiling finishes.

## Refurbishment Works to Existing Hotel

As part of this project an extension to the existing hotel was constructed and the fit-out carried out by ABM. These works included fit-out of the bedrooms and bathrooms and refurbishment works to the section of existing hotel that was broken out to accommodate the new extension. Works to the extension also involved the construction of a function room which was fitted out with acoustic timber panelling, an entertainment system and a fully fitted dedicated kitchen area to support events such as conferences and weddings.

The contract date was extended considerably as a result of ground difficulties experienced due to water which fundamentally changed the foundation design. Additional work instructions were also issued during the project which involved the refurbishment works to Fingal Balbriggan.
